

LIVE ORACLE APEX TRAINING

Online or In-Person Instructor Led Training

Expert Level Training for Fourteen Years.

With a combined experience of 50 years in Oracle APEX and a solid teaching track record you can trust us to deliver the education to achieve maximum knowledge transfer..

Class Reviews Average 4.9 out of 5

More than 500 reviews that average 4.9 out of 5! We let our results speak for themselves. Take a look at our reviews to see what actual students are saying about our training.

Schedules that Work for Employees & Employers

Online classes typically run in full day sessions. This keeps developers out of work an entire day. Studies have found that too many consecutive hours of training reduces comprehension and retention. SkillBuilders' online classes are delivered in half-day sessions (except by special request). Our 4-5 hour sessions are rare if not unique. We can do this because when our instructors aren't teaching they're building APEX applications.

Hands-on Learning, Building Real Apps

Studies show - and most people agree - people learn by doing. So, our developer classes include well-planned hands-on labs (aka exercises). So students get the fundamentals with an instructor demo and talk, then get the chance to try it themselves. The instructor is there to help! Learn by Doing!

Instructors that also Develop APEX Applications.

Instructors with real-world experience. Yes, actual and real, real-world experience. Take a look at our Case Studies detailing the development projects our instructors have recently completed. Sometimes a class, especially small Advanced classes, turn into mentoring sessions, i.e. the instructor shows the students how to solve a problem in their own applications!

Where to Start Learning APEX?

Having a fundamental knowledge of SQL will help you construct a better database which forms the foundation for all APEX applications. PL/SQL is required if you want to take advantage of all the built in functionality of the database for server side processing. With a grasp of these two languages you will get the most out of each APEX class.

ORACLE APEX CASE STUDIES AND REVIEWS

See how Skillbuilders has Impacted the APEX community over the past decade.

The course material was expansive, in-depth, and laid out very well and will remain useful after the course has ended.

Kyle H.

CASE STUDY: Lino Schildenfeld

In 2019 Skillbuilders was asked to help with extending the existing functionality and most importantly work on performance optimizations, after the original Monitor Time Tracking Tool application was designed and built in APEX 3.1.2 by the Clients support team.

Not only did the SkillBuilders team deliver on time and budget but also extended the deliverables by migrating the old APEX theme to the latest Universal theme; all APEX PL/SQL code was reviewed, optimized and improved; legacy JavaScript code was re-done using built-in Dynamic Actions making long term applications support simpler and easier.

This dramatically increased application popularity as the UI was modernized and running significantly faster with improvements done on the legacy code.

The great work was appreciated by the Client team making Skillbuilders their APEX support partner of choice.

The course was very interesting, contained lots of information and the instructor explains all the complex information, in a relaxed and easy-to-understand way, to all attendees. There was plenty of time for questions and to go into the details.

Giliam B.

Love the workshops (hands on) aspect. Really appreciated the instructor and the time he took to not only explain his answers to my questions but also made sure I understood by checking in. So thankful this is being recorded for us to go back to!

Amy R.

CASE STUDY: Garry Lawton

The Corona virus pandemic and the uncertainty it has caused has left many retail companies struggling to cope with the changing environment.

A client of ours with it's 400 plus stores nationwide was finding it difficult to keep track and communicate which stores were open, which were closed and the status regarding reopening and ecommerce.

Skillbuilders provided assistance by developing a simple but effective APEX application to manage this situation. The project was completed in just a couple of days thanks to the brand new APEX_DATA_PARSER package allowing the direct import of Excel spreadsheets.

Testimonial

"SkillBuilders has been a tremendous asset in our Oracle Apex application work. [Oracle ACE] Lino Schildenfeld is professional, courteous, flexible, and has always completed tasks on time or often ahead of schedule.

He provides creative solutions and suggestions that enhance the performance and efficiency of our applications."

"I'm excited that we have another chance to bring you in. There are a handful of vendors that I truly enjoy working with, and SkillBuilders is definitely one of them."

Project Manager, Fortune 500 Company

CASE STUDY: Greg Jarmiolowski

NCCC was in the middle of converting their "Apprentice Program" application from Forms to APEX when they realized that this mission critical project was not going to be delivered on time and budget with their initial vendor.

SkillBuilders was brought in to salvage and complete the project. SkillBuilders successfully completed the project on time and under budget.

The Apprentice Program application was migrated to SkillBuilders' AWS hosting platform in the Spring of 2016. This included a migration from BI Publisher to FOP and Apex Office Print.
